Reasons for allowance

Yang (US Patent 62739270), the closest prior art of record, teaches a fertilizer made from organic wastes which is digested by calcined lime or dolomite, and then mixing with zeolite, sawdust, etc. and followed with other steps which are not relevant to the instant claims. The method does not teach the addition of gypsum, calcium chloride or calcium carbonate. The method does not include the addition of carbon dioxide. The method does not teach the use of a deodorizer.

The references A-F and N, as listed on the PTO-form 892, teach some of these limitations, but fail to provide any suggestion to combine the references with Yang in such a way as to provide a method as applicant claims. Furthermore, the prior art of record does not teach or fairly suggest the particulars of claims 5 and 6 or 7 and 8.
